

Accelerating growth in fisheries in Faridpur, Bangladesh

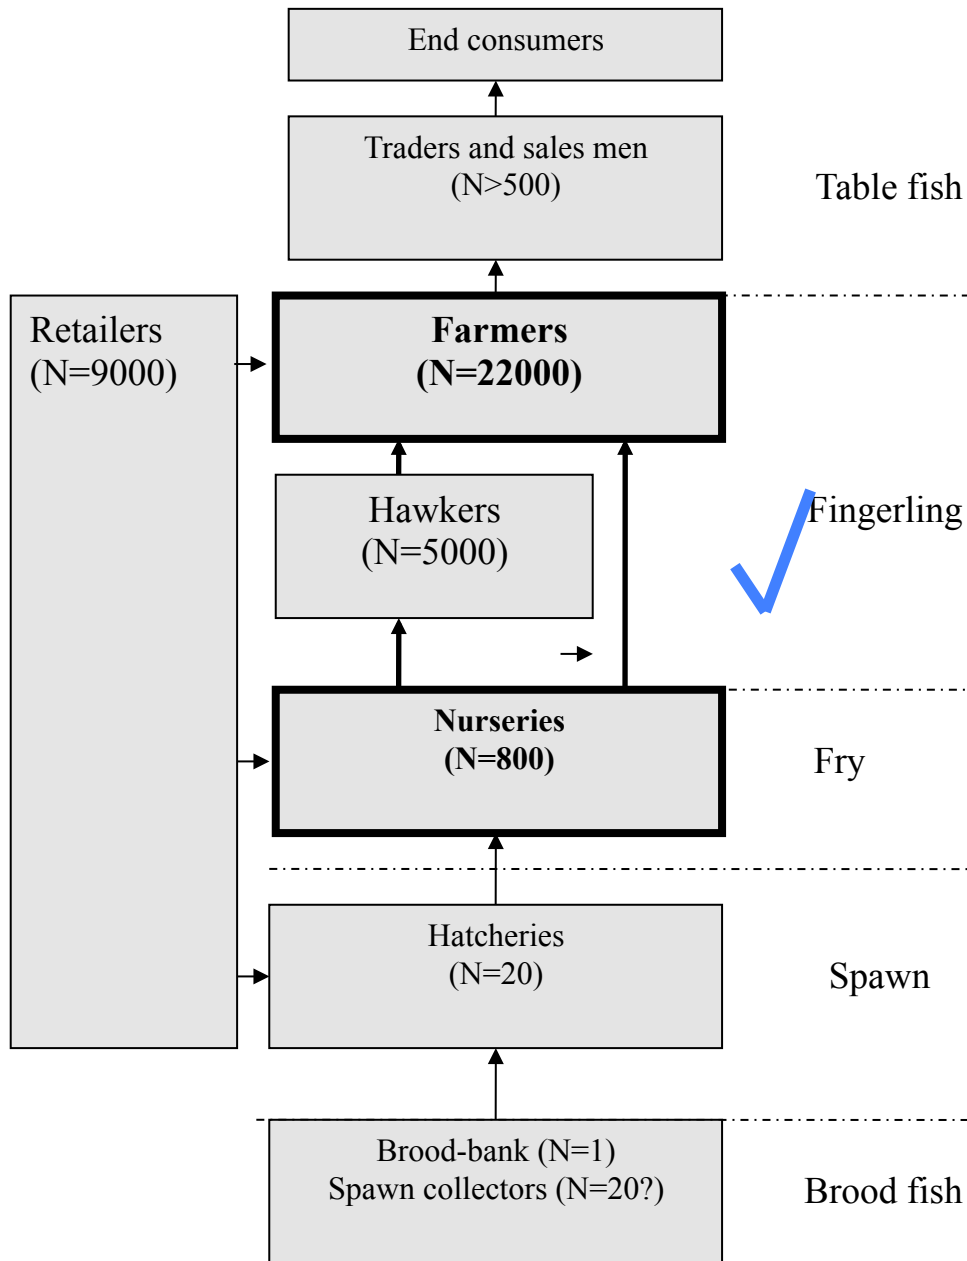

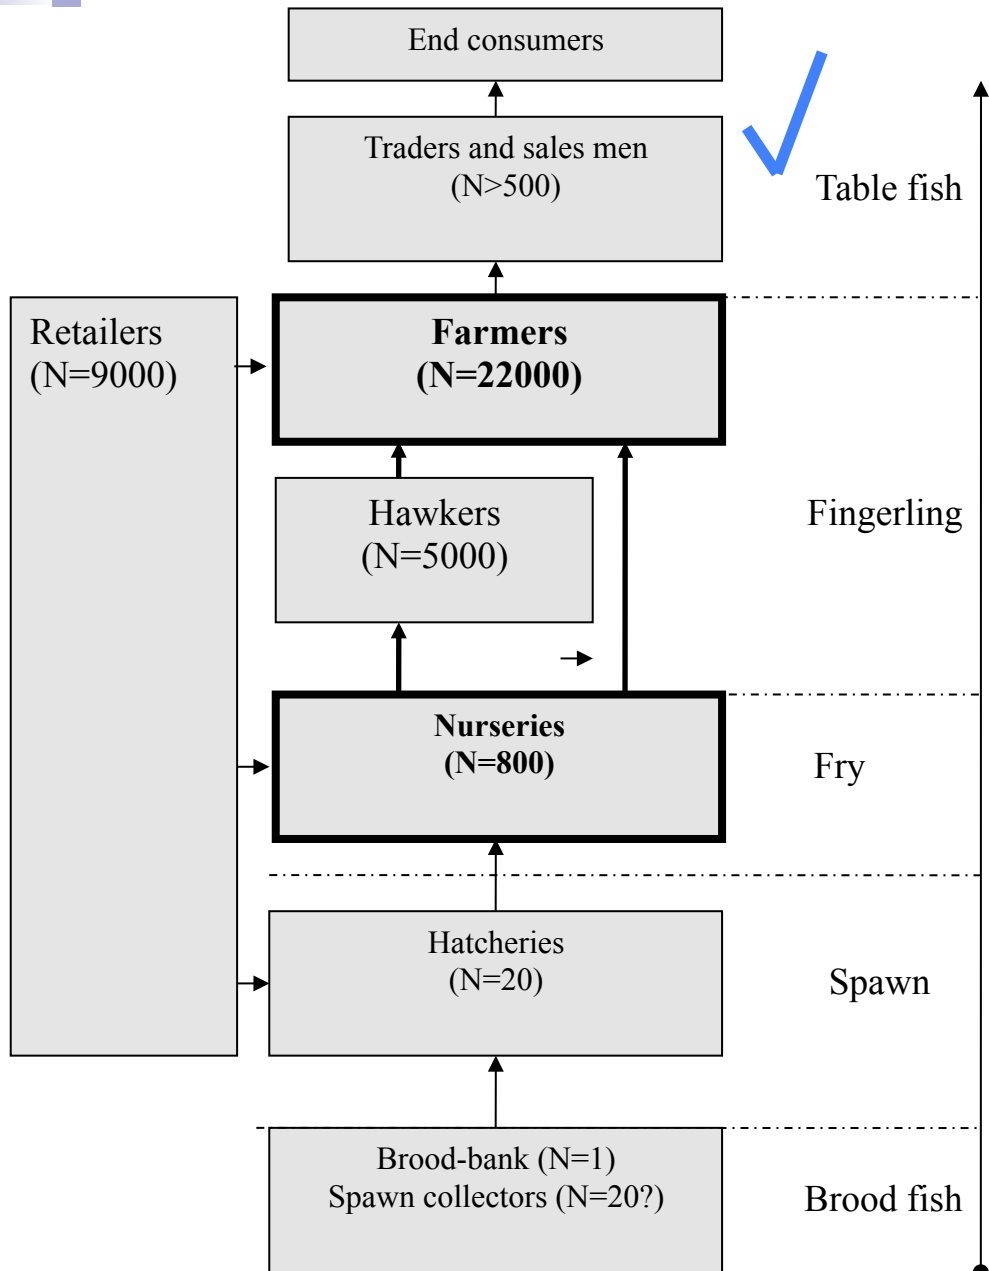

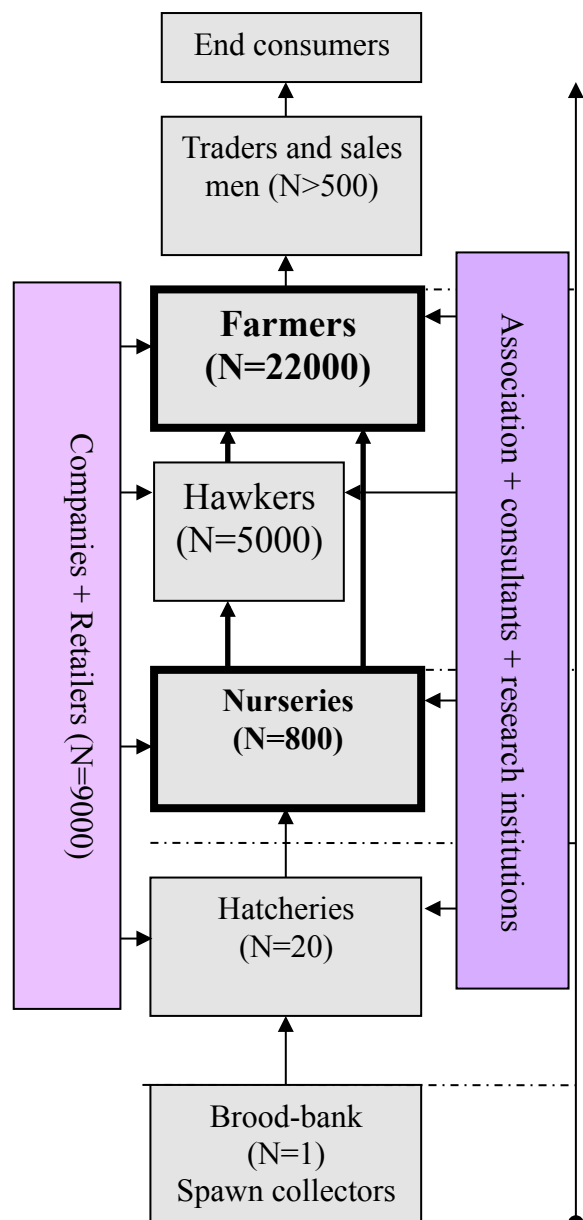

Actors

Sector constraints

Strong demand vs Slow growth fish
High mortality
Low productivity
Traditional species

- Intensification
- Market linkage

Insufficient knowledge on cultivation

- Pond preparation
- Stocking
- Feed / disease
- Use inputs

Poor hatching techniques

- High mortality

Shortage brood & Bad quality

- 1 pub. brood bank

Market-led solutions and entry points

Introduction of new species/technologies

- To lengthen season
- To tap new markets

Entry point: Association, consultants, RI

Establish a physical fingerling market

- To reinforce interaction N - F
- Entry point: Association

Train nurseries as service provider

- To create demand for better brood
- To establish good business practice
- Access to continuous practical advice

Entry point: Association

Train retailers on feed and medicine use

- Access to continuous advice

Entry point: Companies, association

Linkage with advanced region

- Develop list of good technicians

Entry point: Association

Trigger investment in private brood bank

- Feasibility study private brood bank
- Establish technical guidelines

Entry point: Association

Sector strategy

To increase fish production to meet a growing market demand by increasing the productivity of fish ponds by focusing on the following intervention areas:

1. Access to better **inputs**: brood > spawn > fingerlings, chemicals and feed
2. Access to **information** on basic and advanced cultivation techniques
3. Strengthening the capacity of the fisheries **association** to play a **catalyzing role** in the sector
