

PSE in emergency contexts.

How do humanitarians interact with the private sector in emergency contexts?

- Purchase of services
- Purchase of material
- Purchase of material or services modified for specialised use, in discussion and collaboration with the private sector, for humanitarian contexts and emergencies.

PSE Use of the private sector as a service provider

- Examples are (top left) SDC/HA chartering a cargo plane from a private company to deliver COVID related supplies to Venezuela in 2020.
- Right hand example is transporting drilling rig and material in South Sudan in 2012. Specialised heavy lift helicopters and crew were needed from a private contractor
- Left lower example is part of a RRM mission in South Sudan 2014, delivery of food aid by charter plane.

PSE Private sector as provider of material.

3 month medical supply for a primary health care center in Yei River State

PSE Use of the private sector as a service provider

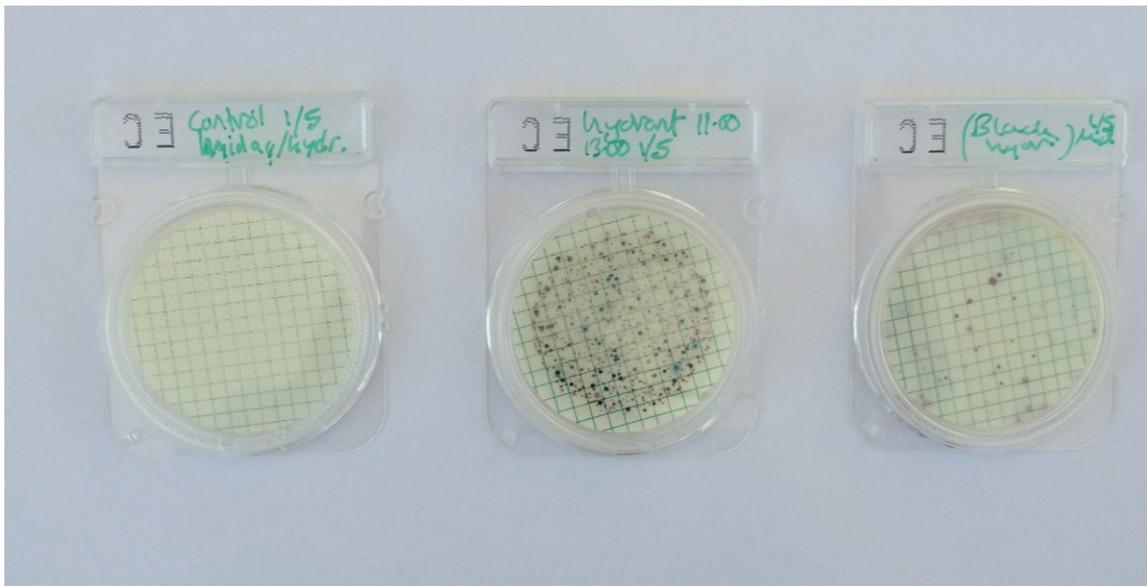

Examples from difficult to access areas, Unity State South Sudan and West Anbar Iraq.

PSE Use of the private sector as a provider of material, sometimes modified for Humanitarian contexts

- Left, Biological water test lab
- Water filter
- Production of chlorine solution using Electrolysis

PSE Use of the private sector as a service provider

Installation of a high temperature incinerator for burning medical waste during EVD

IHIP

INTERNATIONAL HUMANITARIAN INFRASTRUCTURE PLATFORM

IHIP is addressing the need of humanitarian driven organizations to engage with the private sector in larger and complex infrastructure project designed to help those displaced population and the hosting communities . The primary focus is to harmonize private sector approaches to be applied in those countries subject to fragility, conflict and violence, mainly through forms of contract for construction.

Derisking construction projects with the right contract

Why the situation is changing:

- 1: Size and complexity: The size of the population which infrastructure projects have to be designed for keeps increasing and can sometime include urbanization planning: the level of complexity during the humanitarian response is higher than ever and will keep growing
- 2: Donors are expecting new infrastructure to be climate smart and there is an urgent request for innovative solution to be implemented in order to be SDG compatible.

Impact on managing construction project:

=> New actors have to be included in the life cycle of such projects mainly with the local private sector, specifically engineering and local contractors.
