innovations for sustainable development

Background of the AGUASAN Follow-up Missions

- *AGUASAN Workshop 2016: Implementing the Water Goal – SDG in practice*
- 6 working groups developed draft SDG 6 strategies for Tanzania, Macedonia and Haiti
- Follow-up missions as opportunity to follow-up on the results of workshop:
 - Tanzania February 2017
 - Macedonia April 2017
 - Haiti *planned* in November 2017

Objectives of Follow-up Missions

Why?

- ✓ To be familiarized with the national framework and the status quo of implementation of SDG 6
- ✓ Derive recommendations based on the above findings
- ✓ Identify potential support for the implementation and monitoring of SDG 6

What?

- Tanzania: 2 roundtables and field trip
- Macedonia: bilateral interviews with key stakeholders and field trip

Results TANZANIA

Opportunities:

- Stability, water priority sector, strong sector framework
- Government willingness and ownership → Alignment of national and SDG framework done
- Development partners committed and well acquainted with SDG 6

Challenges:

- sectoral and interministerial coordination:
 - monitoring → government
 - implementation → development partners and government
- No domestication of SDG 6 → devil in details
- Multiple frameworks, indicators and agencies → large data gaps and lack of monitoring capacities
- Acting on framework and monitoring results → long process, lack of resources

Challenges:

- Protracted government crisis and water abundance → different priorities
- Inappropriate sector framework and lack of capacities
- No ownership or commitment at decision-making level
 - SDG doesn't concern an EU accession candidate
 - “EU framework has it all”
- complexity of SDG framework and lack of clarity reg. targets, indicators and monitoring methodology

Opportunities:

- strong development partner mandated for SDG
- EU agenda as main driving force for water sector reform

Question from WTD participants

- *What role SDC can play in enhancing ownership of achieving these targets by the respective state agencies? How can we help to mobilise resources in a sustainable way?*
 - Coordination role
 - Policy dialogue
 - Support governments in monitoring:
 - guidelines
 - trainings
 - peer-exchange workshops with SDG-pioneer-countries such as the Netherlands
 - bridge building between national and global level

THANK YOU!
